EDUCATION

University of Cincinnati

Expected Graduation: May 2026

B.Sc., Information Technology – Software Development | Masters: Business Administration | Minor: Computer Science

- GPA: 3.989
- Relevant Coursework: Data Structures, Computer Programming II, Programming Languages, AI Applications, Web Server Development, Mobile Device Programming, Enterprise Development, Database Mgmt I and II, System Analysis & Design
- Teaching Assistant for Database Management II

SKILLS

Programming Languages: C#, Python, Java, C++, TypeScript, JavaScript, HTML, CSS, SQL

Frameworks: Express.js, Angular, Bootstrap, .NET Core, ASP.NET, Xamarin, Tailwind CSS, Entity, .NET MAUI, Phaser, Junit, RxJS

Software: Git, VS Code, Docker, Azure DevOps, Postman, MongoDB, SQLite, MySQL, SSMS, Azure Data Studio, Jira, Perforce, Jupyter

EXPERIENCE

London Computer Systems

Software Developer Intern

May 2023-August 2023 | May 2024-August 2024

- Contributed to the development of our flagship product, *Rent Manager Express*, a web app for property management.
- Led frontend development utilizing the **Angular** framework, executed backend functionality using **C#** and **ASP.NET**, and implemented efficient database management through **MySQL** and **HeidiSQL**. Successfully completed 60+ tickets.
- Collaborated in an **Agile** environment, actively participating in daily stand-up meetings, sprint planning, and iterative development to deliver high-quality features and enhancements on time.
- Soloed the enhancement of Accounts Receivable Task Automation by adding a scheduling option that sends notifications on specific days, introducing a filter for the newest unpaid charges, and improving the user interface for a more intuitive setup.
- Refined the Surveys feature by updating the kebab menu with options to view, void, delete, and copy surveys. Designed and implemented a new Send Survey tool for targeted tenant feedback, streamlining the process.
- Developed a 'CAM Expense Adjustments' report with versatile display options for tenant-based CAM cost allocation.

QA Software Tester Intern

May 2022-August 2022

- Responsible for developing and executing detailed test cases on software updates to our company's product.
- Utilized **HeidiSQL** to collect and analyze data, effectively updating and maintaining multiple databases.
- Collaborated with dev teams to complete 80+ tests, contributing to the successful implementation of software updates.

PROJECTS

ActiveLife Tracker

June-August 2024

- Developed a full stack fitness tracking web application using the **MEAN** tech stack (**MongoDB**, **Express.js**, **Angular**, **Node.js**)
- Implemented custom user authentication using **JWTs** for secure sign-in and data protection. **Cached** user data to enhance API call performance. Designed an **algorithm** to generate personalized macro plans based on user characteristics.
- Built dynamic charts for daily, monthly, and yearly exercise and nutritional breakdowns, integrated the **FDA FoodData Central API** for food item lookup, and utilized **MongoDB Atlas** and **MongoDB Compass** for database management.
- Conducted API testing with **Postman**, styled the app using **Tailwind CSS**, and utilized **RxJS** for reactive programming.
- Managed source code with **Git**, achieving active user engagement across multiple college campuses.

Crypto Tracking Mobile App

April 2024

- Engineered a versatile coin tracking app leveraging **Xamarin.Forms** (with backend **C#** and **XAML** frontend) for cross-platform development, integrating **RESTful APIs (Etherscan)** for real-time cryptocurrency data retrieval.
- Implemented dynamic UI customization, empowering users to personalize themes, and font sizes across the app.
- Employed an **SQLite** database for seamless data storage and retrieval, enabling asynchronous operations for features.

Automated Sports Text Script

July 2023

- Developed a **Python** script to interact with the **ESPN API** for retrieving daily sports data and rigorously tested with **Postman**.
- Integrated the **Twilio API** to send automated text messages containing sports updates.
- Configured a **Raspberry Pi** and **Crontab** to work as a dedicated server to host and run the script daily.

Endless Runner Game

April 2023

- Developed a 2D web-based [game](#) using **JavaScript** and the **Phaser** framework.
- Integrated **Geolocation** and **Weather APIs** to retrieve real-time data which dynamically modified the game's appearance

SPRING/SUMMER 2025 CO-OP/INTERN AVAILABILITY
