EDUCATION

University of Cincinnati Graduated May 2026

B.Sc. Software Application Development | M.B.A. (Accelerated Program) | Minor: Computer Science | GPA: 3.983

- Relevant Coursework: Data Structures & Algorithms, Database Mgmt I & II, Web Server Development, Enterprise Development, Machine Learning, AI Applications, Programming Languages, Mobile Device Programming, System Analysis & Design
- Teaching Assistant: Data Technologies Programming | Database Management I & II

TECHNICAL SKILLS

Frontend: Angular, React, Next.js, TypeScript, JavaScript, HTML/CSS, Tailwind CSS, RxJS
Backend: FastAPI, Node.js, Express.js, ASP.NET, C#, Python, Java, Go, C++, REST APIs, JWT Auth
Database: PostgreSQL, MongoDB, SQL Server, MySQL, Entity Framework, SQLAlchemy
Tools & DevOps: Docker, Git, AWS EC2, Azure Functions, NGINX, Postman, CI/CD, Vercel, Jira

EXPERIENCE

London Computer Systems

Software Developer May 2023 – Present

- Converted to full-time Software Developer role after completing 5 co-op rotations.
- Developed and enhanced production features for Rent Manager Express, the company's flagship enterprise property management platform, built with **Angular**, **C#/ASP.NET**, and **MySQL.**
- Delivered 160+ production tickets spanning frontend features, backend enhancements, defect fixes, and UI improvements.
- **Diagnosed and resolved a critical production issue** by tracing a data-loading failure to oversized base64 uploads in the **Quill editor** and implementing client-side input sanitization and backend handling of large file uploads.
- Enhanced Accounts Receivable Task Automation by implementing UI filters, notification scheduling, and **UI/UX** improvements to streamline collection workflows.
- Collaborated in an **Agile** environment with sprint planning, standups, and code reviews to deliver production-ready features.

PROJECTS

Away Game (Live | GitHub) September 2025 – April 2026

Angular, TypeScript, Tailwind CSS, FastAPI, PostgreSQL, Docker, Azure Functions, Clerk, GitHub Actions

- **Won Best Overall Project** (65+ teams) and Best in Category at university Senior Expo.
- Built a full-stack web app for traveling sports fans to discover nearby games, safety alerts, fan meetups, and social features.
- Architected a scalable backend using **FastAPI**, async **SQLAlchemy**, **Alembic** migrations, and **PostgreSQL**; deployed as an **Azure Function** app with a nightly scraper job via scheduled triggers.
- Implemented end-to-end authentication with **Clerk** and custom **JWT** handling, securing client-server communication.
- Built an interactive **Leaflet** mini-map centered on the user's location via **Browser Geolocation API**.
- Added real-time event chat and a full friend/DM system using **REST polling** with visibility-aware intervals, backend content filtering, and per-user seen-timestamp tracking for notifications.
- Containerized services with **Docker** and configured **GitHub Actions** CI/CD for automated Azure deployment.

CLI & Web Productivity Tracker (GitHub) August 2025

Go, PostgreSQL, AppleScript, Chrome Extension (JS), React, Next.js, Docker

- Built a macOS activity tracking system using a **Go**-based CLI tool and **Chrome extension** to capture application and web usage, persisting logs in **PostgreSQL** via a background macOS **launchd** daemon.
- Visualized usage data via a **Cobra** CLI with terminal charts (**asciigraph)** and a **React/Next.js** dashboard with **Recharts**.

ActiveLife Tracker (Live | GitHub) June – August 2024

MEAN Stack (MongoDB, Express, Angular, Node.js), AWS EC2, NGINX, Jest

- Built a full-stack fitness app: **Angular** frontend on **Vercel**, **Node/Express** backend on **AWS EC2** behind **NGINX** with **Certbot SSL**.
- Engineered a custom auth system with **JWTs**, **bcrypt**, email verification, tokenized password resets via **BREVO**, and adaptive **Google reCAPTCHA** for bot mitigation.
- Integrated the FDA FoodData API for real-time nutritional lookup and built personalized macro-plan generation algorithms. Visualized workout and nutrition breakdowns with **Chart.js** and frontend caching to reduce redundant API calls.
- Applied **RxJS** for reactive async state management and **express-rate-limit** middleware to protect backend services. Tested with **Postman** and **Jest**.
